*4 LISTENING MODE SET,**LISTENING MODE SETTING REQUEST** [4byte]

When you set the "Listening Mode"with the receiver's front panel keys and knobs,
you use the "LISTENING MODE SELECTOR" knob along with "LISTENING CH SELECT"button.
Depending on the source signal there are some modes which are not available. There is
automatic detection for 2ch and 6.1ch, but that too is source dependent (flags) and may not appear to work properly

With the "**SR**" command, you can select whichever mode you wish.
Also, you can confirm your selection with the "**SR**" command by using "**?S**" command query.

When a LISTENING MODE is changed, the set will dispatch an ANSWER to let the controller know the current set status
automatically without receiving a LISTENING MODE SETTING REQUEST. (Automatic Feedback)

Below is the list Indicating the combination of the LISTENING MODE selected by "SR" command and
the LISTENING MODE determined by the input source signal.

When the LISTENING MODE is set and the format for the source signal is confirmed, the receiver will send an ANSWER
COMMAND to the controller to let it know the LISTENING MODE status. It replies automatically and does not need to receive
a LISTENING MODE REQUEST.
(Automatic Feedback)
LISTENING MODE shows the current signal format the receiver is detecting or the surround mode which has been added to the original signal
